6400 DRAM Module

The Pinnacle of Performance and Stability

Transcend's latest 6400 MT/s DRAM modules leverage advanced DDR5 technology and innovative features to meet the demands of high-speed industrial computing. Integrated with CKD (Client Clock Driver), these modules ensure precise clock signal distribution, enhancing overall performance and data transfer reliability. The CSODIMM, CUDIMM, and R-DIMM designs comply with JEDEC standards, ensuring seamless compatibility and robust stability across a wide range of devices.

Comply with JEDEC Standard
Compliant with JEDEC memory standards and subject to Transcend's rigorous quality control standards.

CKD & PMIC
Reduce clock jitter, improve signal integrity, and ensure data accuracy.

Reliability
Offers customizable anti-sulfur resistors, 30μ" PCB gold fingers and conformal coating to enhance DRAM durability and resistance against corrosion, dust, and moisture.
